

## How it Works

Electric Checks offers a web interface that allows a small business to bill, collect and manage customer payments made by paper check without the check.

You want to simplify how you get paid and your customers want the easiest way to pay you. How do you want to simplify your payment process? Here is what you can do directly from your desktop:

- **Recurring Billing**-Set up an automated recurring payment schedule (weekly/monthly/quarterly) so that your customers will pay you by electronic debit/credit without having to remember. Notify the customer that payment has been collected, automatically by e-mail.
- **Email Invoicing**-Use your email to invoice your customer.
- **Telephone/Email/Fax/Web Payments**-Accept a check over the phone/fax/email/web, enter the check data into the web interface, press a button, debit/credit occur.
- **Check Conversion**-convert a paper check to an electronic check through the web interface using the Automated Clearing House.
- **Online Payment** - Customize an online payment form -- even without a website. Your customer can purchase from a shopping cart. Online forms are easy to set up without technology experience.
- **Auto-Email Receipts**-Send email receipts for each payment you process. Notify your customers of upcoming schedules payments.
- **Credit Card Processing**-You may accept check only, credit card only or check and credit card payments.
